

Animation strip: cut this out along the dotted line. You will place this strip inside your zoetrope when it is complete.

Zoetrope base: Cut this out and use a pencil or something similar to punch a hole in the middle (marked in black). Later you will put your stem through this hole and secure it to the base.

Zoetrope: Cut out carefully where marked. You'll then create a cylinder with the zoetrope and stick together. Your base will go on the bottom, and the base flaps will fold up into the gaps at the bottom of the zoetrope. Make sure the base is secured to the zoetrope.
